

**METHODS AND DEVICES FOR PROTECTING A PASSAGEWAY IN A
BODY WHEN ADVANCING DEVICES THROUGH THE PASSAGEWAY**

5

ABSTRACT OF THE DISCLOSURE

A liner is advanced through a narrowed region in a vessel such as the internal carotid artery. The liner is advanced through the narrowed region in a collapsed position. A stent is then advanced through the liner and expanded to open the narrowed region. The liner may also have an anchor which expands an end of the
10 liner before the stent is introduced.
